Packaging fonts

Posted on April 18, 2012 (<http://dynamicjasper.com/2012/04/18/packaging-fonts/>), updated on August 14, 2016

(<http://dynamicjasper.com/2012/04/18/packaging-fonts/>) by admin (<http://dynamicjasper.com/author/admin/>)

According to official JasperReport documentation, it is very recommended to package your fonts with your reports to prevent exceptions like:

```
net.sf.jasperreports.engine.util.JRFontNotFoundException: Font 'Arial' is not available to the JVM
```

Unless you specify a physical font file (i.e. a *.tff* file), for a given font name (like “Arial”) the JVM will ask the underlying S.O. for such font, if not present: Exception. But you can package your fonts in a jar (<http://stackoverflow.com/questions/8985497/use-custom-fonts-when-creating-pdf-using-ireport>) file and JasperReports will look for them.

We already packaged 7 well known fonts in the following jar file that you can add to your project as a maven dependency (remember to add our maven repository ([/2011/12/23/is-there-a-maven-repository/](http://dynamicjasper.com/2011/12/23/is-there-a-maven-repository/)))

```
<dependency>
  <groupId>ar.com.fdv</groupId>
  <artifactId>DynamicJasper-core-fonts</artifactId>
  <version>1.0</version>
</dependency>
```

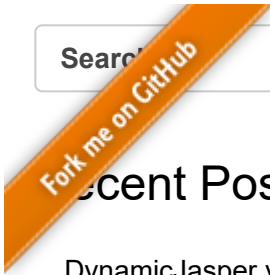

Such fonts are:

- Arial
- Times New Roman
- Courier New
- Comic Sans MS
- Georgia
- Verdana
- Monospaced
